                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          US-09-478-681-30

US-09-478-681-30

Sequence 30, Application US/09478681

Patent No. 6607882

GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Case, Casey Christopher

APPLICANT: Spratt, Sharon K.

TITLE OF INVENTION: REGILATION OF ENDOGENOUS GENE EXPRESSION IN CELLS

TITLE OF INVENTION: USING ZING ZING FOUTEINS

FILE REFERENCE: 8325-0002.10 / S2-US3

CURRENT FILING DATE: 2000-01-06

SOFTWARE: PatentIN Ver. 2.0

Sequence 94, Application US/10113424

Sequence 94, Application US/10113424

Patent No. 6785613

(GENERAL INFORMATION:
APPLICANT: Eisenberg, Stephen P.
APPLICANT: Case, Case, C.
APPLICANT: Gos, II, George N.
APPLICANT: Gos, III, George N.
APPLICANT: Sangame Biosciences, Inc.
TITLE OF INVENTION: Selection of Sites for Targeting by Zinc Finger
TITLE OF INVENTION: Delain and Methods of Designing Zinc Finger
TITLE OF INVENTION: Los Bind to Preselected Sites
TITLE OF INVENTION: Los Bind to Preselected Sites
CURRENT APPLICATION NUMBER: US/10/113, 424
CURRENT APPLICATION NUMBER: US/09/229,007A
PRIOR APPLICATION NUMBER: US/09/229,007A
PRIOR PILING DATE: 1999-01-12
NUMBER OF SEQ ID NOS: 97
SEQ ID NO 94

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 21, Application US/09731558

Sequence 21, Application US/09731558

Patent No. 6503777

GENERAL INFORMATION:

APPLICANT: Gase, Casey Christopher

APPLICANT: Liu, Olang

APPLICANT: Bangame Bloscience, Inc.

APPLICANT: Rebar, Edward J.

TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger

TITLE OF INVENTION: Proteins for the Identification of Gene Function

TITLE OF INVENTION: Proteins for the Identification of Gene Function

TITLE OF INVENTION: Proteins for the Identification of Gene Function

CURRENT FILING DATE: 10994-103-06

PRIOR APPLICATION NUMBER: US/09/731,558

CURRENT FILING DATE: 1999-12-06

NUMBER OF SEQ ID NOS: 24

SOFTWARE: PATENTIN Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 21, Appl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                            December 27, 2004, 18:12:11; Search time 15.9 Seconds (without alignments) 29.197 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /cgn2_6/ptodata/1/iaa/5A_COMB.pep:*

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Liu, Qiang
APPLICANT: Rebar, Edward J.
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-00321005
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                       December 27, 2004, 18:12:11 ; Search time 15:9 Seconds (without alignments) 29:197 Million cell updates/sec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-09-478-681-15

Sequence 15, Application US/09478681

Sequence 15, Application US/09478681

Patent No. 6607882

GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Eisenberg, Stephen P.

APPLICANT: Spratt, Sharon K.

TITLE OF INVENTION: REGILATION OF ENDOGENOUS GENE EXPRESSION IN CELLS

TITLE OF INVENTION: USING ZING FINGER PROTEINS

FILE REFERENCE: 8325-0002.10 / S2-US3

CURRENT FILING DATE: 2000-01-06

NUMBER OF SEQ ID NOS: 43

SOOTWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                              Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                               December 27, 2004, 18:12:11 ; Search time 15:9 Seconds (without alignments) 29:197 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1: /cgn2_6/ptodata/1/iaa/5A_COMB.pep:*

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 5763209

GENERAL INFORMATION:
APPLICANT: SUKhathe, Vikas P.
TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO THE
TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS
NUMBER OF SEQUENCES: 67

CORRESPONDENCESS:
ADDRESSEE: Arnold, White & Durkee
STREET: 321 No. 5763209th Clark Street, Suite 800

Patent No. 6503717

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Liu, Qiang

APPLICANT: Liu, Qiang

APPLICANT: Edward J.

APPLICANT: Rebar, Edward J.

FULE REFERENCE: 019496-003210US

TITLE OF INVENTION: Proteins for the Identification of Gene Function

TITLE OF INVENTION: Proteins for the Identification of Gene Function

FILE REFERENCE: 019496-003210US

CURRENT APPLICATION NUMBER: US/09/731,558

CURRENT FILING DATE: 1999-12-06

NUMBER OF SEQ ID NOS: 24

SEQ ID NOS: 24

LENGTH: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 19, Appl

ALIGNMENTS

New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus. Zinc finger protein; ZFP; DNA binding protein; zinc finger. Zinc finger protein related peptide motif SEQ ID NO:814. ABP49026 standard; peptide; 7 AA. (SANG-) SANGAMO BIOSCIENCES INC. 20-NOV-2001; 2001WO-US043438. 20-NOV-2000; 2000US-00716637. (first entry) WPI; 2002-500284/53. WO200242459-A2. Homo sapiens. 28-AUG-2002 30-MAY-2002. Synthetic ABP49026; Liu Q; **ABP49026**

Example 1; Page 45; 81pp; English.

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) zinc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (1) a polypeptide (II) comprising (M); (2) a polymucleotide (III) encoding (I) or (II); and (A) designing (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to the sate such a selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to having the nucleotide G in the 5'-most position of the subsites (I) is useful in studying gene function, and for human therapeutics and plant

```
The present invention describes a zinc finger protein (I) that binds to a carget site, comprising a first (F1), a second (F2), and a third (F3) zinc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3-5 direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (1) a polypeptide (II) comprising (I), (2) a polynucleotide (III) encoding (I) or (II); and (S1) carget subsite, and selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to the S1 target subsite, thus designing (I) that binds to useful in studying gene function, and for human therapeutics and plant cusquing the expression of a target region within a subject, in a sumple, and in assays to determined the phenotype and function of in a sample, and in assays to determined the phenotype and supparts.
                                                                                                                                                                                                                                                                                  ô
engineering. (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABQ72131 and ABQ72131 and ABQ72131 and ABQ72131 to ABQ72130 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful in studying engineering, comprises N- to C-terminus.
                                                                                                                                                                                                                                                                                  Gaps

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) and carine finger, ordered FI, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CT) comprising (I); (2) a polyhoucleotide (III) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it comparison (I) is useful for recognition of triplet target subsites that it binds to the S3 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to the target sibsite, thus designing (I) that binds to the target subsite, thus designing (I) that binds to useful in studying gene function, and for human therapeutic and plant engineering (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of an assays to ABQ12213 to ABQ12214 and ABBQ1231 to ABBQ12213 to ABQ12214 and ABBQ12310 represent CT finger peptides which are given in the exemplification of the present
                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
gene expression. (1) has improved affinity and specificity for their target sequences, as well as enhanced biological activity, ABQ71213 to ABQ72214 and ABP48191 to ABP51230 represent DNA target sequences and zinc finger peptides which are given in the exemplification of the present

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) are dinger, ordered F1, F2, F3 from N-terminus to C-terminus, where the carget site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CI) comprising (I); (2) a polynuclectide (III) encoding (I) or (II); and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it conditions to the S3 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, and selecting the F2 zinc finger such that it conditions to the S3 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, in the designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (I) a target subsite, thuman therapeutic methods to useful in studying gene function, and for human therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of target sequences, as well as enhanced biological activity. ABG71213 to target sequences, as well as enhanced biological activity, ABG71213 to increase.
                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2), and a third (F3) carget site, comprises, in 3.-2 direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a second (S2), and a third (S3) target subsite. Also described are: (I) a polypepide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (I) comprising (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, selecting the F2 zinc finger such that it binds to the S2 target subsite, selecting the F3 zinc finger such that it comprise to the S1 target subsite, thus designing (I) that binds to the S2 target subsite, thus designing (I) that binds to the S2 target subsite, thus designing (I) that binds to the S2 target subsite, thus designing (I) that binds to that it binds to the S2 target subsite, thus designing (I) that binds to a target set signing (I) that binds to useful in studying gene function, and for human therapeutic methods to custing the mucleotide G in the S'-most position of the subsite. (I) is useful to recognition of the subsite, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of diagnostic methods for sequence specific detection of target sequences, as well as enhanced biological activity. AB071213 to target sequences as well as enhanced biological activity. AB071213 to incomption in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) ainc finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (I) comprising (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S2 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to a target site (I) is useful for recognision of triplet target subsites (I) that binds to a target subsite, thus designing (I) that binds to a target full for recognision of the subsite. (I) is useful in studying gene function, and for human therapeutics and plant engineering. (I), (II) or (III) is useful in herapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. ABQ71213 to ABP31214 and ABP48191 to ABP51230 represent DNA target sequences and zinc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          peptides which are given in the exemplification of the present ion

The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) cardered FT, F2, F3 from N-terminus to C-terminus, where the carget site comprises, in 3'-5' direction, a first (SI), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (CC (II) comprising (I); (2) a polyhucleotide (III) encoding (I) or (II) is and to the S1 target subsite, selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it comparison (I) is useful for recognition of triplet target subsites that it binds to the S3 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (CC a target site) in studying gene function, and for human therapeutic and plant engineering (I), (II) or (III) is useful in therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of target sequences, as well as enhanced bological activity. ABQ71213 to target peptides which are given in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

```
New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                               Zinc finger protein; ZFP; DNA binding protein; zinc finger.
             Zinc finger protein related peptide motif SEQ ID NO:824.
                                                                                                                                                                                                                                                                                  (SANG-) SANGAMO BIOSCIENCES INC.
                                                                                                                                                                                                                                                  20-NOV-2000; 2000US-00716637.
                                                                                                                                                                                                              20-NOV-2001; 2001WO-US043438.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (FI), a second (F2), and a third (F3) time finger, ordered F1, F2, F3 from N-terminus to C-terminus, where the target site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (C (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II); and (I) comprising (M) (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, and selecting the F3 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites having the nucleotide G in the 5'-most position of the subsites (I) at such a full or (III) is useful in studying gene function, and for human therapeutics and plant modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determine the phenotype and function of target such and in assays to determine the perpension of target region within a subject of the control of target such and in assays to determine the subsider for the such and a sample, and function of target such and a such a such and a such and a such and a such and a such a such and a such a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

target site, comprising a first (FI), a second (F2), and a third (F3) carget site, comprising a first (FI), a second (F2), and a third (F3) carget site, ordered F1, F3 from N-terminus to C-terminus, where the carget site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3), and third (S3) target subsite. Also described are: (1) a polypeptide (II) comprising (I); (2) a polymucleotide (III) encoding (I) or (II); and (S3), as a polymucleotide (III) encoding (I) or (III); and (S3) target subsite, selecting the F1 zinc finger such that it comprises at target subsite, selecting the F2 zinc finger such that it coming to the S3 target subsite, selecting the F3 zinc finger such that it coming to the S3 target subsite, thus designing (I) that binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (setul in studying gene function, and for human therapeutics and plant useful in studying gene function, and for human therapeutic methods to modulate the expression of a target region within a subject, in condinate the expression of a target region within a subject, in a sample, and in assays to determined the phenotype and function of gene expression. (I) has improved affinity and specificity for their target sequences, as well as enhanced biological activity. The invention provides a method of modifying a region of interest in cellular chromatin that involves contacting the cellular chromatin with a cellular chromatin that involves contacting the cellular chromatin with a cellular chromatin with a cellular chromatin had binds to a binding site in the region of interest, where the fusion molecule comprises a DNA binding domain and a component of a chromatin remodeling complex or its functional fragment, which condifies the region of interest. The method is useful for modifying a region of interest, in particular a gene encoding a product such as vascular endothelial growth factor, erythropoietin, androgen receptor, percoxisome proliferator-activated receptor (PPAR-gamma2), pl6, p53, pRb, dystrophin and c-cadherin in cellular chromatin present in a plant, animal or human cell. The chromatin modification facilitates detection of activation or repression of a gene of interest or recombination between an exogenous nucleic acid and cellular chromatin. It also results in generation of an accessible region in the cellular chromatin which facilitates binding of an exogenous molecule such as polypeptides, cucleic acids, small molecule therapeutics, minor groove binders, major groove binders and intercalators. The fusion molecule may be used for complianting expression of a gene and for binding an exogenous molecule to a binding site located within a gene in cellular chromatin.

Polynucleotides encoding the fusion polypeptide are useful for gene therapy to modulate gene expression, for therapeutic retinopathy, macular degeneration, rheumatoid arthritis, psoriasis, HIV infection, along a capture of a planting a gene of second arthritis, psoriasis, HIV infection, along a capture of the provides and for a capture of the planting expression of a gene of capture in cellular chromating and provide and cellular chromating and planting expression of a second and expense and planting expression of a gene and for therapeutic acide, second and expense expression of a defense expression o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a zinc finger protein (I) that binds to a target site, comprising a first (F1), a second (F2) and a third (F3) and a third (F3) in thinger, ordered F1, F2, F3 from N-terminus to C-terminus, where the carget site comprises, in 3'-5' direction, a first (S1), a second (S2), and a third (S3) target subsite. Also described are: (I) a polypeptide (II) comprising (I); (2) a polynucleotide (III) encoding (I) or (II) and (I) involves selecting the F1 zinc finger such that it binds to the S1 target subsite, and selecting the F2 zinc finger such that it binds to the S1 target subsite, and selecting the F3 zinc finger such that it conditions to the S3 target subsite, and selecting the F2 zinc finger such that it binds to the S3 target subsite, thus designing (I) that binds to that it binds to the S3 target subsite, thus designing (I) that binds to a target site. (I) is useful for recognition of triplet target subsites (C5 a target site. (I) is useful in therapeutic methods to useful in studying gene function, and for human therapeutic methods to modulate the expression of a target region within a subject, in diagnostic methods for sequence specific detection of target nucleic acid in a sample, and in assays to determined the phenotype and function of the sequences, as well as enhanced biological activity. AB071213 to AB072214 and AB072214 and AB072214 and AB072214 or their condition of the present increase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New zinc finger protein that binds to target site, useful in studying gene function and for human therapeutics and plant engineering, comprises first, second and third zinc fingers, ordered from N- to C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           VEGF; chromatin; cytostatic; vasotropic; antidiabetic; ophthalmological; antirheumatic; antiarthritic; antipsoriatic; anti-HIV; antisickling; neuroprotective; nootropic; cerebroprotective; antibacterial; fungicide; virucide; gene therapy; Veg 1; zinc finger.

```
The sequences given in AAB47802-16 represent zinc finger domains derived from transcriptional effector proteins. These transcriptional effector proteins. These transcriptional effector proteins. These transcriptional effector transcriptional initiation site of the human vascular endothelial growth factor (VEGF) gene. Target site #1 was bound by a binding domain containing six zinc fingers, named VEGF3a/1. Target site #2 was bound by a three-finger zinc finger domain, VEGF-1, and a control six-finger containing proteins were used to demonstrate the method of the invention for binding an exception molecule (EM) to a binding site (BS), where the BS is located within a region of interest in cellular chromatin. The method comprises identifying an accessible region within the accessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region in cellular chromatin can be used for detection of a particular sequence, for example, and exogenous molecule, such a sequence-specific DNA binding protein, can be used to detect variant alledes associated with a disease or with a particular phenotype in the presence of pathological miscrooraganisms in cellular proteins molecule.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in clinical samples. Exogenous molecules can also be used to quantify copy number of a gene in a sample. For example, detection of the loss of one copy of a p53 gene in a clinical sample is an indicator of susceptibility to cancer. The methods can also be used in assays to determine gene function and to determine changes in phenotype resulting from specific modulation of gene expression

The sequences given in AAB47802-16 represent zinc finger domains derived from transcriptional effector proteins. These transcriptional effector proteins. These transcriptional effector proteins. These transcriptional effector proteins. These transcriptional initiation site of the human vascular endothelial growth factor (VEGF) gene. Target site #1 was bound by a binding domain of factor (VEGF) gene. Target site #1 was bound by a binding domain of a three-finger and finger domain, VEGF-1, and a control six-finger containing proteins were used to demonstrate the method of the invention for binding an exogenous molecule (EM) to a binding site (BS), where the BS is located within a region of interest in callular chromatin. The method comprises identifying an accessible region within the region of interest, identifying a target site for the EM within the concessible region, and introducing the EM into the Cell, where the EM cacessible region, and introducing the EM into the cell, where the EM cacessible region of suscent of suscences general expension by administering an exogenous molecule. The binding of an exogenous molecule. The binding of an exogenous molecule contained is useful for modulating gene expression by a daministering an exogenous molecule. The binding of an exogenous molecule contained in a sample, an exogenous molecule, such as a calleles associated with a disease or with a particular phenotype in clinical samples and to detect the presence of pathological microorganisms in confinent samples and to detect the presence of pathological microorganisms in confinity to cancer. The methods can also be used to quantify concernine gene in a clinical sample, an indicator of susceptibility to cancer. The methods can also be used in assays to determine gene function and to determine changes in phenotype resulting
                                                                                                                                             Target site; transcriptional effector protein; zinc finger domain; human; vascular endothelial growth factor; VEGF; cellular chromatin; gene expression; sequence-specific; DNA binding protein; phenotype; copy number; p53; cancer; gene function.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Binding an exogenous molecule (EM) to a binding site located within a region of interest in chromatin, useful for modulating gene expression, by identifying an EM target site within an accessible region and introducing the EM into the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New zinc finger protein that binds to target site in vascular endothelial growth factor gene, useful for modulating expression of the gene and for treating atherosclerosis, ischemia, arthritis, wound or ulcer.
                                                                                                                                                  Zinc finger protein; angiogenesis; vasculogenesis; ischaemia; diabetic retinopathy; psoriasis; arthropathy; cancer; tumour growth; gene therapy; antiatherosclerotic; vasotropic; antiarthritic; vulnerary; antiulcer; cytostatic; antipsoriatic; antidiabetic; ophthalmological; osteopathic; antiinfertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a zinc finger protein that binds to a target site in one or more vascular endothelial growth factor (VBCF) genes. The protein is useful for modulating expression of a VEGF gene, thereby regulating angiogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischaemia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide shown in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Zinc finger protein; angiogenesis; vasculogenesis; ischaemia; diabetic retinopathy; psoriasis; arthropathy; cancer; tumour growth;

New zinc finger protein that binds to target site in vascular endothelial growth factor gene, useful for modulating expression of the gene and for treating atherosclerosis, ischemia, arthritis, wound or ulcer.
     vulnerary;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to a zinc finger protein that binds to a target site in one or more vascular endothelial growth factor (VEGF) genes. The protein is useful for modulating expression of a VEGF gene, thereby regulating anglogenesis and vasculogenesis. This can be used to treat atherosclerosis, ischemaia, arthritis, wounds, ulcers, tumours, diabetic retinopathy or psoriasis. The present sequence is a peptide shown in the invention
gene therapy, antiatherosclerotic; vasotropic; antiarthritic; vulnera:
antiulcer; cytostatic; antipsoriatic; antidiabetic; ophthalmological;
osteopathic; antiinfertility.
                                                                                                                                                                                                                                                                                                                     Eisenberg SP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     100.0%; Score 7; DB 5; Length 7; llarity 100.0%; Pred. Patent No. 6794136

GENERAL INCORMATION:

APPLICANT: ELIGENBERG, Stephen P.

APPLICANT: LIU, Qiang

APPLICANT: AMIESON, Andrew

APPLICANT: REBAR, Edward

TITLE OF INVENTION: ITERATIVE OPTIMIZATION IN THE DESIGN OF BINDING

TITLE OF INVENTION: PROTEINS

FILE REFERENCE: 8325-0020

CURRENT APPLICATION NUMBER: US/09/716,637

CURRENT PILING DATE: 2001-10-12

NUMBER OF SEQ ID NOS: 35
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /cgm2_6/prodata/1/iaa/5A_COMB.pep:*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 30, Application US/09229037A

Sequence 30, Application US/09229037A

Patent No. 6534261

GENERAL INFORMATION:

APPLICANT: Cox II, George No. 6534261bert

APPLICANT: Case, Casey Christopher

APPLICANT: Elsenberg, Stephen P.

APPLICANT: Sangamo Biosciences, Inc.

APPLICANT: Sangamo Biosciences, Inc.

TITLE OF INVENTION: Regulation of Endogenous Gene Expression in Cells Using

TITLE OF INVENTION: Zinc Finger Proteins

FILE REFERENCE: 019496-002200US

CURRENT APPLICANION NUMBER: US/09/229,037A

NUMBER OF SEQ ID NOS: 109

SOSTWARER PATENTING DATE: 1999-01-12

SOSTWARER PATENTING OF TOWN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 97, Application US/09229007A

Sequence 97, Application US/09229007A

Patent No. 6453242

GRNERAL INFORMATION:

APPLICANT: Case, Casey C.

APPLICANT: Case, Casey C.

APPLICANT: APPLICANT: Rebar, Andrew

APPLICANT: Rebar, Edward J.

APPLICANT: Sangamo Biosciences, Inc.

APPLICANT: Sangamo Biosciences, Inc.

TITLE OF INVENTION: Selection of Stres for Targeting by Zinc Finger

TITLE OF INVENTION: Proteins and Methods of Designing Zinc Finger

TITLE OF INVENTION: to Bind to Preselected Sites

FILE REFERENCE: 019496-001800US
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2, Appli

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                       (without alignments)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12, Application US/08793408

Patent No. 6007988

GENERAL INFORMATION:
APPLICANT: Choo, Yen
APPLICANT: Klug, Aaron
APPLICANT: Sanchez Garcia, Isidro
TITLE OF INVENTION: Improvements in or Relating to
TITLE OF INVENTION: Binding Proteins for Recognition of DNA
NUMBER OF SEQUENCES: 18
CORRESPENDENCE ADDRESS:
ADDRESSEE: Pillsbury Madison & Sutro, L.L.P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         100.0%; Score 7; DB 4; Length 28; 100.0%; Pred.
